Talli: A Portable Voting System

Paper Prototype Descriptive Document
JDD 8333 • 10/18/18

Background Information

Talli is a web application targeted towards access from mobile devices (eg. smartphones with web browsers). It is a portable voting system that is used at events, like academic poster sessions, where attendees are allowed to vote on and rank their favorite entries so a prize can be awarded to the most popular entry.

You will be assuming the role of an event attendee who is voting on the entries to the event. You may assume that the event organizer has already set up the event correctly.

Tasks

1. Join an event as an event attendee
2. Add three event entries to your voting slate
3. Change the ranking of one entry on your voting slate to #1
4. Submit your final rankings for consideration
