Hiring Manager, Human Resources Division
Microsoft Corporation

October 27, 2025

Dear Hiring Manager,

I am writing to apply for Software Engineer - Fullstack. I am a Georgia Tech Computer Science student (B.S. expected Dec 2025) as well as a GTC alum (A.S. graduated May 2021), with 4+ years of full-stack and systems architecture experience across web, desktop, and mobile platforms.

I build reliable, testable systems end-to-end confidently and have experienced development cycles of features from design through implementation and operation. Moreover, I instrument systems with logging and telemetry to monitor and debug behavior in production.

My core strengths are definitely coding in various languages including Java/Kotlin, Python, C/C++, JavaScript/Node.js, and C# with frameworks based on Software Development Life Cycle (SDLC) principles including build automation, architecture and design documentation, reliability and operations with instrumentation, error handling, and integrated unit testing. I have practical experience collaborating with product owners, clinicians, and cross-functional teams to produce maintainable systems and clear documentation.

For transparency, I have not served as a designated DRI and haven't worked with CI/CD pipelines or formal SLA ownership experience. However, I have the ability to learn new domains quickly, as demonstrated by the attached resume, which highlights projects across diverse areas with measurable results.

I am scheduled to graduate in December 2025 and will be available for full-time employment thereafter. I am authorized to work in the U.S., comfortable with a remote IC2 role and willing to travel within the 0-25% range.

Thank you for your consideration.

Sincerely,

Jaehoon Song
