**Hiring Manager, Human Resources Division**                           October 31, 2025
*Oracle Corporation*

Dear Hiring Manager,

I am applying for the Undergrad Software Engineer - Global Industries position at Oracle. I am a Georgia Tech Computer Science student (B.S. expected Dec 2025) with a 3.87 GPA and an A.S. from Gwinnett Technical College (May 2021). I have 4+ years of full-stack and systems architecture experience across web, desktop, and mobile platforms.

I have worked with Oracle systems throughout my academic and professional experience. At Gwinnett Technical College, I completed multiple Java projects using JDBC with Oracle databases. At SK C&C USA, I managed Oracle database operations for manufacturing execution systems. At Georgia Tech, I use Oracle's HR Payroll system during teaching assistantships and developed a CLI database tool inspired by Oracle's architecture while working on a Gradle-based healthcare system.

I have strong proficiency in the required technologies and all programming languages listed in the job description except AI-related frameworks. I have completed multiple teaching assistantships, developed software across the full lifecycle from design to operation, and work effectively in collaborative, agile environments. I adapt quickly to new domains, demonstrated through experience in education, manufacturing systems, financial applications, and healthcare applications with clients including Emory University clinicians, factory workers, and end users. Detailed qualifications and technical skills are in my attached resume.

I will graduate in December 2025 and be available for full-time employment thereafter. I am authorized to work in the U.S. and do not require visa sponsorship.

Thank you for your consideration.

Sincerely,

**Jaehoon Song**
